

Our DevCraft methodology starts with understanding user requirements, mission goals, and current capabilities to create a strategic approach for delivering solutions. This leads to predictable delivery, high user adoption, and cost-saving, optimized software. At its core, DevCraft focuses on the right people and processes. We ensure team skillsets and personalities match the problem and apply a proven agile methodology for efficient delivery, resulting in timely, high-adoption capabilities.

## Stakeholder Engagement

Stakeholder Engagement is key to successful software delivery. We collaborate with users, leadership, and technical teams to define requirements, lead solutioning sessions, and ensure ongoing enhancements add value. We conduct UAT, provide demos, and capture prioritized FOC capabilities based on mission needs.

## Problem Focused

NextPoint Group uses a Problem Focused approach to address requirements, prioritizing the core problem over solutions. Through Stakeholder Engagement, we understand user pain points and create tailored solutions that align with mission objectives, ensuring high user adoption.

## Tools and Technology

We stay current on Tools and Technology to deliver best-in-class solutions. Our team rapidly deploys mission capabilities using modular design, streamlined UI/UX, and reliable security compliance. Automated monitoring ensures efficient support, clear updates, and faster issue response.

## Collaborative Solutions

NextPoint Group uses lean agile methodologies to drive Collaborative Solutions. Through daily standups, sprint planning, and partner discussions, our multidisciplinary team develops plans to solve mission challenges and deliver technical solutions.

## Integrated Security Practices

Integrated Security Practices are embedded in our DevCraft process, with all team members sharing responsibility. Our skilled Information Systems Security Engineers (ISSE) lead security requirements and navigate the A&A process to achieve Authority to Operate (ATO), ensuring compliant solutions from project initiation.
